1497. Check If Array Pairs Are Divisible by k

Medium 1759 94 Add to List Share

Given an array of integers `arr` of even length `n` and an integer `k`.

We want to divide the array into exactly $\frac{n}{2}$ pairs such that the sum of each pair is divisible by `k`.

Return `true` if you can find a way to do that or `false` otherwise.

Example 1:

Input: `arr = [1,2,3,4,5,10,6,7,8,9]`, `k = 5`

Output: `true`

Explanation: Pairs are (1,9), (2,8), (3,7), (4,6) and (5,10).

$n \rightarrow \text{even}$

(k)

$n=10$
